Front-End:

- Languages : HTML5 | JavaScript | CSS
- Library and Framework: Reactjs and Angular Js

Backend:

- NodeJs

Database:

- Mango DB.

EDUCATION & CERTIFICATIONS:

- Bachelor of Science in Computer science (Khallikote autonomous college)
(2017-2020)

PROJECT:

Title: Connect with Provider

Description:

This project is a web application developed using React.js, designed to provide a one-step solution for patients to easily submit and manage their insurance claims. The platform allows users to upload necessary documents, track claim status, and receive real-time updates. With a user-friendly interface and seamless backend integration, the system automates the claim

submission process, reducing paperwork and improving the overall efficiency for both patients and insurance providers.

Title: Catalyst and Seller Management

Description: The Catalyst and Seller Management project is a web-based application designed to streamline the process of managing both catalysts (key business drivers) and sellers within a platform. This system allows businesses to easily onboard, manage, and track their sellers, while also identifying and monitoring catalysts that drive sales and performance.

Through a centralized dashboard, administrators can assign sellers to specific catalysts, monitor performance metrics, and make data-driven decisions to optimize sales strategies. Sellers can update their profiles, track their progress, and access relevant resources to improve performance. The platform aims to enhance collaboration, optimize resource allocation, and ensure better communication between sellers and business managers, leading to improved sales outcomes and operational efficiency.
